11	Care for patients with diseases of the of the stomach and intestines	Create an action algorithm	1
12	Care for urological patients	Create an action algorithm	1
13	Care for patients with vascular diseases	Create an action algorithm	1
14	Care of patients with thermal trauma	Create an action algorithm	1

Opinion of the methodological supervisor from the higher education institution on the internship

During the nursing practice, under the supervision of the methodological supervisor, the student got acquainted with the algorithm of practical skills provided to him/her in printed or electronic form, and consolidated the acquaintance by watching thematic videos. Most of the skills were practised during classroom training or during internships. The algorithms of the mastered practical skills, plans for preparing patients for instrumental examination methods, extracts from protocols for emergency care, and independent work were recorded by the student (in writing in the diary) in a printed folder. The control of mastering the algorithms for performing practical skills and independent work was carried out remotely (on the platform of the Viber, Skype programme) through oral questioning, solving clinical problems, thematic tests, checking written or printed works.

The student completed the state practice programme in full.
